

CYBERSECURITY & ENERGY: MANAGING THE THREAT LANDSCAPE, EMERGING TRENDS & PUBLIC POLICY

VIRTUAL TRAINING | APRIL 27, 2022

Join natural gas industry colleagues for a must attend virtual session focused on today's increasing cyber threats and major trends. Learn what energy companies can do to protect their assets and to prepare to deal with new regulations and requirements from government. Hear directly from cyber experts on the operations and policy side of the cyber landscape including the Chief Information Officer responsible for the technical and data integrity of a major natural gas pipeline company.

Attendees of all disciplines will greatly benefit from the program discussion. Topics will include:

- Increasing global cyber-attacks and the impact of the Russian-Ukraine War
- Critical infrastructure risks and how basic IT tools create exposure
- New government regulations and pending U.S. DOE / Homeland Security / SEC disclosure requirements
- Cyber interference with SCADA real time systems and industrial controls

This cybersecurity session will be focused on a practical, solution-based approach providing the attendee with key takeaways to benefit their organization rather than a highly technical program. Participant questions are encouraged before and after the program, but especially during the discussion to create a dynamic information packed forum.

PROGRAM DETAILS

11:00 am – 11:05 am	Marcellus Shale Coalition Welcome and Introduction
11:05 am – 12:15 pm	Emerging Trends in Cyber: Threats, Regulations and Risks for Critical Infrastructure
12:15 pm – 12:30 pm	Practical Discussion and Q & A
